E-Commerce Sales Analysis & Prediction

Power BI Dashboard Plan — 10 Business Questions

Purpose: Organize the three report pages and choose a suitable visualization for each business question.

Dashboard 1 — Sales Performance

No.	Business question	Suggested visual
1	What are the total recorded sales (revenue) and total purchased sessions?	KPI Cards
2	How does revenue change month by month?	Line Chart
3	Which product categories generate the highest revenue?	Bar Chart
4	What is the average revenue per purchased session (AOV proxy)?	KPI Card

Dashboard 2 — Customer & Marketing Analysis

No.	Business question	Suggested visual
5	What percentage of sessions result in a purchase (conversion rate)?	KPI Card / Funnel
6	How does purchase behavior differ between new and returning users?	Clustered Column Chart
7	Which marketing channels generate the most recorded revenue?	Bar Chart
8	Which device types account for the most purchased sessions?	Bar / Donut Chart

Dashboard 3 — Product & Regional Analysis

No.	Business question	Suggested visual
9	Which 10 products generate the highest recorded revenue?	Horizontal Bar Chart
10	How does recorded revenue vary across locations?	Bar Chart / Map

Suggested common filters

Visit month/date, product category, marketing channel, device type, and location. Use slicers and sync them across pages where appropriate.

Metric notes

• Treat “Total Orders” as purchased sessions unless a true order identifier is available.
• AOV is total recorded revenue divided by purchased sessions; label it as an AOV proxy if sessions are not confirmed to equal orders.
• Populate charts with actual Power BI results; no findings or performance values are assumed.
